Risktec is a leading provider of professional training and education in Risk and Safety Management. We work in partnership with Liverpool John Moores University (LJMU) delivering postgraduate courses.

The postgraduate programme has been designed to meet the growing need for industry-related courses and qualifications in risk and safety management. The courses are delivered by teachers with industrial experience and aim to develop the practical skills and knowledge of students.

The modules are kept current through Risktec’s processes for monitoring research programmes, new developments, legislation and standards, as well as experiences from across our worldwide consulting activities.

These qualifications will benefit anyone seeking to implement practical risk management within highly regulated industries where the impact of loss is high, whether ‘systems’ sectors such as nuclear, defence, rail and aviation, or in ‘process’ industries such as oil and gas, petrochemical and chemical.

Apply now to start your postgraduate programme on 1st October 2023
Email: training@risktec.tuv.com or visit: risktec.tuv.com
“I’m SO GLAD I decided to start this coursework. It has been immediately applicable to my day to day job, and so incredibly helpful.” (Sarah, USA)

Why invest in a postgraduate qualification in risk and safety management?

- There is a shortage of skilled risk and safety professionals, so a postgraduate qualification can be a fast track into the profession
- More punitive legislation, use of novel technology and high profile major accidents ensure that risk and safety management is a growing profession
- A postgraduate qualification demonstrates learning with the ability to think creatively in order to solve complex risk and safety problems

At the end of the programme you will be able to:

- Justify the use of risk assessment through illustration of its objectives and drivers
- Analyse and evaluate a broad range of practical risk management tools and techniques and demonstrate expertise in selected techniques
- Devise practical solutions for real-life risk management problems
- Develop a questioning and critical attitude to management of risks
- Display mastery of clear and effective communication of risk
- Demonstrate a commitment to the risk management profession

Our students are given access to LJMU’s e-library and useful guidance on a range of study skills including Academic Writing, Library Skills, Referencing and even complimentary access to 24 different Rosetta Stone language courses.

### Enrolment options:

Students have the option of either enrolling directly on to the MSc, or enrolling initially on the PgCert, and then upgrading to the PgDip and finally the MSc.

### Entry requirements for all applicants:

A relevant bachelor degree or equivalent, or 5+ years’ relevant work experience, and proven English language capability.
The MSc project comprises a dissertation of approximately 15,000 words. The project is selected in consultation with Risktec and requires the student to justify the project’s objectives and development plan. Risktec guides the student in selecting a state-of-the-art topic in risk and safety management that is of real interest to current and prospective employers. The student liaises with an industrial (Risktec) supervisor throughout the project.

Completing the MSc enables the student to demonstrate an in-depth knowledge of specific issues related to their dissertation topic, present systematic and relevant written arguments and apply analytical skills in a rigorous and comprehensive manner.
“The course widens one’s horizons and empowers to think beyond the common school of thoughts. It adds a new dimension to explore and challenge the incorrect approaches to safety and risk management in high hazard industries.” (Prashant, UAE)

How is the Programme Delivered?

The programme is delivered by distance learning via our online learning environment, Risktec Online. The module material typically comprises 150 slides with explanatory notes, videos, references to further reading and useful websites. During each module students engage in online activities including tests and discussions, which encourage participation and interaction. Each module has a duration of 8 weeks and culminates with a formal written assessment.

Support from the module teachers is available throughout the programme.

Our distance learning programmes are 100% online, therefore students can study from anywhere in the world.
